Sample Assessment Material

Time: 1 hour 15 minutes

Materials required for examination	Items included with question paper
Nil	Nil

Instructions to Candidates

In the boxes above, write your centre number, candidate number, your surname, initial(s) and signature. Check that you have the correct question paper. Answer ALL the questions. Write your answers in the spaces provided in this question paper.

Some questions must be answered with a cross in a box (X). If you change your mind, put a line through the box (\boxtimes) and then mark your new answer with a cross (\boxtimes) .

Do not use pencil. Use black or blue ink.

Information for Candidates

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2). There are 28 questions in this question paper. The total mark for this paper is 80. There are 28 pages in this question paper. Any blank pages are indicated. Candidates may use a calculator.

Advice to Candidates

Quality of written communication will be taken into account in the marking of your responses to Questions 26(b)(ii), 27(a)(vi), 27(b), 28(b)(i), 28(b)(iv) and 28(b). These questions are indicated with an asterisk. Quality of written communication includes clarity of expression, the structure and presentation of ideas and grammar, punctuation and spelling.

The following questions deal with situations. Each situation is followed by a set of questions. Select the best answer for each question.

22. This question concerns the preparation of 1-bromobutane from butan-1-ol, 50% sulfuric acid and sodium bromide. The mixture was placed in a flask and heated under reflux for ten minutes.

	Boiling temperature / °C
1-bromobutane	100
butan-1-ol	118

(a)	The reason the	hat 50%	sulfuric	acid	was	used	rather	than	concentrated	sulfuric	acid	is
	because cond	centrated	sulfuric	acid								

X	Δ	would	ovidise	some o	f the	bromide	ions to	bromine
	\boldsymbol{A}	would	oxidise	some o	i ine	bronnae	ions to	oronnine.

X	В	would	cause	the	reaction	to	go	too	fast
---	---	-------	-------	-----	----------	----	----	-----	------

Y	D	ic too	hozordoug o	aham	ioo1
	υ	1S 100	hazardous a	cnem	icai.

(1)

(b) The reaction mixture was distilled. The impure distillate did **not** contain

X	A	butan-1-ol

(1)

Use this space for any rough working. Anything you write in this space will gain no credit.

(c)	sha	e impure 1-bromobutane was washed with concentrated hydrochloric acid and ken in a tap funnel with a base to remove acidic impurities. Which of the following uld remove acidic impurities without reacting with the 1-bromobutane.	blank
\boxtimes	A	calcium hydroxide solution	
×	В	sodium hydroxide solution	
×	C	calcium chloride solution	
\boxtimes	D	sodium hydrogencarbonate solution (1)	
(d)		e 1-bromobutane was washed with water, dried and distilled. Which of the owing is the correct procedure?	
\times	A	heat the liquid to 118 °C and collect the substance given off	
\times	В	heat the liquid to 100 °C and collect the substance given off	
\boxtimes	C	boil the liquid and collect the fraction that boils off between 116 and 120 °C	
\boxtimes	D	boil the liquid and collect the fraction that boils off between 98 and 102°C (1)	Q22
		(Total 4 marks)

*(b)	One method of the manufacture of	f alcohols is to	react steam	with an	alkene.
	For example				

$$C_2H_4(g) + H_2O(g) \longrightarrow C_2H_5OH(l)$$

Suggest nalogenc		why	this	method	is	preferred	to	the	hydrolysis	of
	••••••	 •••••	••••••			•••••		•••••	•••••	(2)

(c) 1-bromobutane reacts with an ethanolic solution of potassium hydroxide on heating to form but-1-ene. A diagram of the apparatus that could be used to carry out this reaction and to collect the gaseous but-1-ene is shown below.

(i)	State the hazard when the heating is stopped.

(1)

(ii) How would you minimise the risk associated with this hazard?

Q27

(1)

(Total 15 marks)

TOTAL FOR SECTION B: 34 MARKS

SECTION C

Answer ALL the questions. Write your answers in the spaces provided.

28. Chlorine was used in swimming pools as a bactericide.

The amount of chlorine present can be determined by adding excess potassium iodide solution to a known volume of swimming pool water. This reacts to form iodine:

$$Cl_2(aq) + 2I^-(aq) \rightarrow I_2(aq) + 2Cl^-(aq)$$

The amount of iodine formed is then found by titration with sodium thiosulfate solution of known concentration.

The ionic equation for the reaction between iodine and sodium thiosulfate in aqueous solution is

$$I_2(aq) + 2S_2O_3^{2-}(aq) \rightarrow S_4O_6^{2-}(aq) + 2I^{-}(aq)$$

A student carried out the determination of chlorine in a sample of swimming pool water. A record of the measurements obtained is given below:

Volume of water sample tested $= 1000 \text{ cm}^3$

Final reading of burette = 16.3 cm^3

Initial reading of burette $= 7 \text{ cm}^3$

Volume added from burette = 9.3 cm^3

Concentration of sodium thiosulfate solution = 0.00500 mol dm⁻¹

(a) (i) The record of measurements reveals faults both in the procedure and the recording of measurements. State **one** fault in each of these.

Procedure

Recording of measurements

(2)

(ii) Calculate the number of moles of sodium thiosulfate used in the titration.

(1)

Leave
blank

	(iii) Use your answer to (ii) to calculate the number of moles of iodine which reacted.	1
	(iv) Deduce the concentration of chlorine, in mol dm ⁻³ , in the swimming pool water	
	(1)
(b)	The disinfecting action of chlorine in swimming pools is due to the presence o chloric(I) acid, HClO, formed by the reaction of chlorine with water.	f
	In many swimming pools, chemicals other than chlorine are used to form chloric(I acid. This is partly because the use of chlorine gas causes much more corrosion o metal parts in swimming pools than does chloric(I) acid.	
	Compounds used to chlorinate swimming pool water in this way include calciun chlorate(I) and chlorine dioxide.	1
*	State and explain the type of reaction that occurs when chlorine attacks a metal using the example of iron.	,
		,
	(2	
	(ii) Suggest one other reason why the use of chlorine is undesirable in swimming pools.	5
	(iii) Give the formula for calcium chlorate(I).)
	(1)
